

Understanding the Probrand Cyber Security Risk Assessment

Understand Your Cyber Security Risk.
Clearly. Confidently.

Supports organisations working towards Cyber Essentials,
ISO 27001, and recognised security best practice.

Understand Your Cyber Security Risk. Clearly. Confidently.

Cyber Security is no longer just an IT issue. It's a business risk, an insurance consideration, and a governance responsibility.

The **Probrand Cyber Security Risk Assessment** helps UK organisations clearly understand their current security posture and identify where action will deliver the greatest reduction in risk.

Completely **FREE**

Delivered with a Probrand Cyber Security specialist

No obligation

What the assessment covers

The assessment reviews **core areas of Cyber Security**, covering people, process, and technology.

- ✓ Email Security
- ✓ Firewalls & Network Protection
- ✓ Remote Access & VPN
- ✓ Multi-Factor Authentication (MFA)
- ✓ Backup & Disaster Recovery
- ✓ Cyber Hygiene & Security Awareness
- ✓ External Access & Internet-Facing Services
- ✓ Insurance & Compliance Readiness
- ✓ Patching & Vulnerability Management
- ✓ Data Loss Prevention & Information Protection
- ✓ Microsoft 365 Security
- ✓ Endpoint Security (EDR/XDR)
- ✓ Managed Detection & Response

How the assessment works

The assessment is completed with you, guided by a **Probrand Cyber Security specialist**.

During the session:

- Questions are clearly explained
- Answers reflect your real-world environment
- No system access is required
- No technical documentation is needed on the call

Questions use simple Yes / No / Unknown / N/A responses, keeping the process straightforward and practical.

How long does it take?

Most assessments take between 20 minutes and 1 hour.

Depending on:

- Organisation size
- IT environment complexity
- How readily information is available

Designed to be low-impact, with minimal preparation required.

What you'll receive

Cyber Security Risk Assessment Report

After the assessment, you'll receive a formal Cyber Security Risk Assessment Report, suitable for technical teams and business leaders alike.

The report includes:

- ✓ An overall Cyber Security maturity score
- ✓ A breakdown of each security area assessed
- ✓ Clear identification of higher-priority risks
- ✓ A practical action plan with realistic timescales
- ✓ A summary suitable for leadership, insurers, or auditors

The focus is on **clarity and prioritisation**, not pass or fail.

Why is this assessment important?

Many organisations invest in security tools but lack a clear view of how effective their controls really are.

This assessment helps you:

- ✓ Understand exposure to common attack methods
- ✓ Identify quick wins versus longer-term improvements
- ✓ Support cyber insurance discussions
- ✓ Strengthen governance and risk reporting
- ✓ Create a sensible roadmap for improving security maturity

Low scores do not indicate failure - they highlight where improvements will deliver the greatest reduction in risk.

Aligned with recognised standards

Cyber Essentials

The assessment aligns with the core control areas required by Cyber Essentials, including:

- Secure configuration
- Access control and MFA
- Malware protection
- Patch management
- Network boundary protection

It helps organisations understand readiness and gaps before pursuing certification.

ISO/IEC 27001

The assessment also aligns with ISO/IEC 27001 principles, including:

- Risk-based security management
- Control effectiveness
- Governance and accountability
- Continuous improvement

While it does not replace certification or audits, it provides a strong foundation for internal reviews and audit preparation.

What happens next

Once the report is complete, you can simply use it as:

- A reference point
- A risk discussion document
- Evidence of due care and active risk management.

If required, Probrand can also support you in **prioritising risks, closing gaps, and strengthening controls** - but there is no obligation.

Why Trust Probrand?

Probrand is a UK-based IT services and Cyber Security provider, supporting organisations across the private and public sectors.

Established in 1992, with over 30 years' experience, we help organisations reduce cyber risk, improve resilience, and move from insight to action.

Our approach is practical and security-led - focused on strengthening controls, reducing exposure, and supporting informed decision-making.

We don't just identify risk - we help you reduce it.

Experience, Standards & Approach

We deliver IT Support, Services, and Solutions for organisations typically supporting 25–500 users, acting as either an extension of in-house IT teams or a fully outsourced IT department.

Our services are underpinned by recognised standards and partnerships.

This Cyber Security Risk Assessment reflects the same approach we apply across all services: clear, practical, and focused on improving security without unnecessary complexity.
