Cyber Security

Stay ahead of the criminals with **cyber security** solutions tailored to your needs.

It's not if, it's when

Hardly a week goes by without a major cyber security breach being reported in the press. Cyber criminals are creating new, innovative ways to target your organisation and make money via malware and social engineering techniques. 74% of businesses suffered a security breach in the past year, are you prepared for when it's your business? As cyber threats grow to become increasingly sophisticated, it is a priority for businesses large and small, to keep pace with the shifting threat landscape and adopt trusted solutions to protect against a breach that could cost your reputation and financial stability.

The threat is evolving

- The web gives cyber criminals more opportunities to make money from your business
- There's been a 91% increase in ransomware attempts
- 25% of cyber attacks are expected to be on IoT devices by 2020
- Attacks are evolving with a 200% increase in whaling attacks
- 63% of confirmed breaches were based on leveraging weak, stolen or default passwords

The Probrand approach
Start with a review of your security

Get an understanding of any vulnerabilities within your IT systems with a free Cyber Security assessment worth over £500. Our assessment will show you how to address the basics and prevent the most common attacks. We will:

- Provide 4 hours consultancy from a qualified ACE practitioner
- Identify and analyse issues
- Give tailored guidance on improvements needed
- Provide a written board level report

A solution that's tailored to your business

By understanding your business and identifying where your vulnerabilities are, whether that's human or technology, we can help build, update, and deploy your IT security strategy to ensure business-critical data is protected. We focus on tailoring a multi-layered security solution fit for your needs that can adapt as your business grows, and as the cyber threat landscape changes.

For SMBs without an IT team, outsource your IT management to us, and for IT professionals in larger organisations, let our team work as an extension to yours, using our expertise to deliver managed services and solutions projects to keep you protected.

Our cyber security solutions

Social engineering
Identify sophisticated threats before employees can be exploited into divulging confidential data.

Patch management
Efficiently handle upgrades or patches to keep systems up-to-date and secure.

Perimeter security (firewall)
Protect your IT system with a solution that scans your network traffic to stop threats before they get in.

Security best practice
Get guidance from a technical team on best practice to educate employees.

Penetration testing
Find vulnerabilities in your system before an attacker can exploit them.

Secure cloud storage
Cut back on costs whilst driving up efficiency by storing data on remote servers.

End point security
Ensure that remote devices do not provide easy pathways to your network.

Disaster Recovery as a Service (DRaaS)
Reduce downtime and expenditure with immediate recovery in hours.

Secure remote access
Control who and how people remotely access your network.

Unified Endpoint Management (UEM)
Manage resources and apps on any device in a single solution.

Data encryption
Encode vital data and information so that only authorised users can access it.

Mail security
Protect email accounts to stop viral or spam threats before they reach your local network.
